Doctor Appointment System

Introduction & Purpose

This report presents the technical design of a **Doctor Appointment System** intended to help patients find doctors, view available appointment timings, and book appointments online. The system provides separate interfaces for **Admin, Doctor, and Patient** users.

The Admin manages doctors, locations, available timings, and appointment information. Doctors can log in to their dashboard, view their information, and manage their appointments. Patients can select a location, doctor, and available time slot before booking an appointment.

The purpose of this document is to describe the application's functional scope, database structure, relationships between entities, user roles, appointment workflow, and major screen flow.

Scope

- Admin login and dashboard
- Doctor information management
- Doctor login and dashboard
- Location management
- Appointment timing management
- Patient appointment booking
- Appointment records
- Patient and doctor information
- Database design
- Screen flow

System Overview

- Admin
- Doctor
- Patient

Core Entities

- **Admin** — Manages the complete appointment system.
- **Doctor** — Provides medical appointment availability and views booked appointments.
- **Patient** — Books appointments with available doctors.
- **Location** — Stores the place where a doctor is available.
- **Schedule** — Stores the doctor's available date and time.
- **Appointment** — Stores the booking between a patient and doctor.

Admin Dashboard

Dashboard can contain:

- Total Doctors
- Total Patients
- Today's Appointments
- Available Locations
- Pending Appointments
- Recent Appointments

Add Doctor Screen

- Doctor Name
- Specialization
- Phone Number
- Email
- Qualification
- Experience
- Location
- Profile Image
- Available Status
- Save Doctor button

Add Location Screen

- Location Name
- Address
- City
- Contact Number
- Status
- Save Location button

Add Schedule Screen

- Doctor
- Location
- Date
- Start Time

- End Time
- Appointment Duration
- Available Status
